SURVEYMONKEY

APAKAH ITU SURVEYMONKEY?

SurveyMonkey ialah satu aplikasi survei dalam talian. Ia membolehkan pengguna membina kaji selidik profesional dengan mudah. Pengguna yang melanggan secara berbayar dan juga pengguna percuma boleh membina kaji selidik serta mengumpulkan dan menganalisis maklum balas kaji selidik mereka. Keputusan kaji selidik boleh dikongsi serta-merta dengan responden yang dipilih. Kaji selidik dari SurveyMonkey boleh dilakukan pada sebarang subjek. Pengguna juga boleh menukar fon dan warna pada muka surat kaji selidik. Keputusan kaji selidik boleh dilihat secara masa nyata.

SurveyMonkey membolehkan pengguna menghantar kaji selidik melalui senarai e-mel atau pautan URL pada laman web agar mudah untuk mendekati responden yang diingini bagi kajian tersebut. Kajian ini juga boleh digunakan dalam pendidikan untuk memperbaiki pengalaman pengajaran dan pembelajaran.

(Sumber:

<https://wiki.itap.purdue.edu/display/INSITE/SurveyMonkey#SurveyMonkey-history>.)

KELEBIHAN SURVEYMONKEY

Kelebihan tambahan menggunakan SurveyMonkey adalah seperti berikut:

- Tanpa had – Anda boleh membina kaji selidik tanpa had jumlah soalan.
- Langkau (Skip / conditional logic) – Anda boleh menetapkan agar kaji selidik melangkau secara automatik soalan yang tidak berkaitan dengan responden berdasarkan pada jawapan mereka kepada soalan-soalan lain.
- Pilihan jawapan secara rawak – Turutan pilihan dalam satu soalan boleh mewujudkan kecenderungan (bias) yang tidak disengajakan. Khidmat ini membolehkan anda merawak pilihan jawapan untuk menghapuskan bias turutan.
- Menapis keputusan – Membantu anda memperoleh corak tertentu pada keputusan kajian anda.
- Berkongsi keputusan – Anda boleh memaklumkan keputusan kaji selidik anda kepada orang ramai tanpa perlu memberikan akses kepada akaun MonkeySurvey anda. Anda juga boleh mengawal keputusan mana yang boleh dilihat.
- Muat turun keputusan – Kesemua data boleh dimuat turun ke komputer anda untuk analisis tambahan. Keputusan kaji selidik boleh dieksport ke Excel untuk membina graf.
- Kaji selidik mesra pengguna – Pengalaman pengguna dipertingkatkan melalui interaktiviti.

KELEBIHAN MENGGUNAKAN SURVEYMONKEY SEBAGAI SURVEI DALAM TALIAN

(a) Memperoleh akses kepada populasi yang unik

- Keupayaan untuk menyediakan akses kepada kumpulan dan individu yang sukar atau tidak dapat didekati melalui rangkaian lain.

(b) Menjimatkan masa penyelidikan

- Membolehkan penyelidik mendekati beribu-ribu orang yang mempunyai ciri-ciri serupa dalam tempoh yang singkat, walaupun terpisah jauh secara geografi.
- Membolehkan pengkaji mengumpulkan data dan melakukan tugas lain dalam tempoh yang sama.
- Maklum balas kepada kaji selidik dalam talian boleh disalurkan serta-merta kepada penyelidik melalui e-mel atau ditampal pada dokumen HTML atau fail pangkalan data. Ini membolehkan penyelidik menjalankan kajian awal sementara menanti tercapainya jumlah maklum balas yang dikehendaki.
- Tidak perlu memasukkan data kerana pengumpulan dan analisis maklum balas data boleh dilakukan menggunakan analisis statistik (cth.: SPSS).

(c) Kos

- Menjimatkan wang melalui peralihan format kertas kepada format elektronik.
- Menghapuskan keperluan kertas dan kos-kos lain seperti kos pos, kos cetakan dan kos kemasukan data.

POLLDADDY

APAKAH ITU POLLDADDY?

Polldaddy ialah kaji selidik dan juga tinjauan (*poll*) dalam talian. Ia hampir serupa dengan Zoomerang memandangkan kedua-duanya menawarkan alat kaji selidik dan tinjauan kepada pengguna. Polldaddy mudah digunakan dan mempunyai antara muka mesra pengguna. Pengguna boleh mendaftar akaun dengan mudah, kemudian mengklik butang untuk membina tinjauan atau kaji selidik baharu. Mereka boleh memasukkan soalan dan jawapan, memilih reka bentuk dan selepas itu, kaji selidik atau tinjauan itu sudah pun selesai. Polldaddy akan memberikan kod yang diperlukan secara automatik untuk disalin dan ditampal atau dibenamkan ke dalam pelbagai laman (contohnya Twitter, Ning).

Polldaddy menjimatkan masa pendidik berbanding dengan penggunaan kuiz bercetak. Antara ciri Polldaddy yang berguna untuk pendidikan ialah ciri yang membolehkan pengguna menambah html, imej, video dan media lain. Respons yang terkumpul boleh ditapis mengikut keadaan. Pengguna juga boleh

mengumpulkan respons dengan mudahnya menerusi iPad, iPhone dan iPod Touch.
